

Energy policy

Albert Hoffmann GmbH appreciates the increasing importance of energy-conscious behavior as regards the conservation of resources and climate. As a company with many years' experience in high quality cast-steel production, we have a particular responsibility to raise the awareness of our staff members, as well as customers and suppliers as to energy efficiency and energy saving, as well as to improve on an ongoing basis our own energy performance by our energy management system according to DIN EN ISO 50001.

This energy policy provides the framework for determining and reviewing strategic and operative energy goals and outlines our responsibility and our awareness as to responsible handling of energy at all levels.

We want to assure that the nature and extent of our organization's use and consumption of energy is appropriate.

We support the purchase of energy-efficient products and services which are meant for improving the energy-related performance.

We commit to

- the continuous improvement of energy-related performance;
- guaranteeing the availability of information, as well as providing the resources necessary to achieve strategic and operative objectives;
- complying with all legal requirements and other requirements assumed by the organization as to the use, consumption and efficiency of energy;

The system is subject to regular internal audits to assure the set targets and implement our energy policy. The quality of our energy management is regularly reviewed by external bodies.
